

# Ceasefire’s Motorcycle Mounted Watermist CAF System

## Technical Features:

Media volume	9 litres
Working pressure at gun	Approx 5 bar
Weights kg	Empty without air cylinder approx. 13.7 kg.
Standard air cylinder	2L/300 bar carbon composite approx. 2.1 kg. Large air cylinder 4.7L/ 300 bar carbon composite approx 4.0 kg. Gun approx 1.9 kg.
Functional temperature range	+5 degrees C to +60 degrees C Depending on media
Extinguishing media flow	Approx. 0.23 l/sec
WindShield	2mm thick FRP
Leg Guard	25mm dia 16 guage nickel plated steel pipe
Siren / Hooter	12V 30 Amp audible at a distance of 200m
Blinking Lights (2 Nos.)	12V 20W each red lights with flasher
First Aid Box	Cotton absorbant 100g, Band Aid 10 pcs, Burnol 2 pcs, Tincture Iodine 100 ml
Escape Gear	Gel Blanket

## Portable. But Powerful

A fire can start anywhere, at anytime. And in just 6 minutes, it can turn into an uncontrollable blaze. This makes it even more important for you to tackle the fire, before it’s too late.

Unfortunately, tiny lanes, inaccessible roads and traffic jams all are a setback when it comes to rushing to the rescue. Which means that by the time the fire engine reaches the scene of the fire, it could very possibly already be too late.

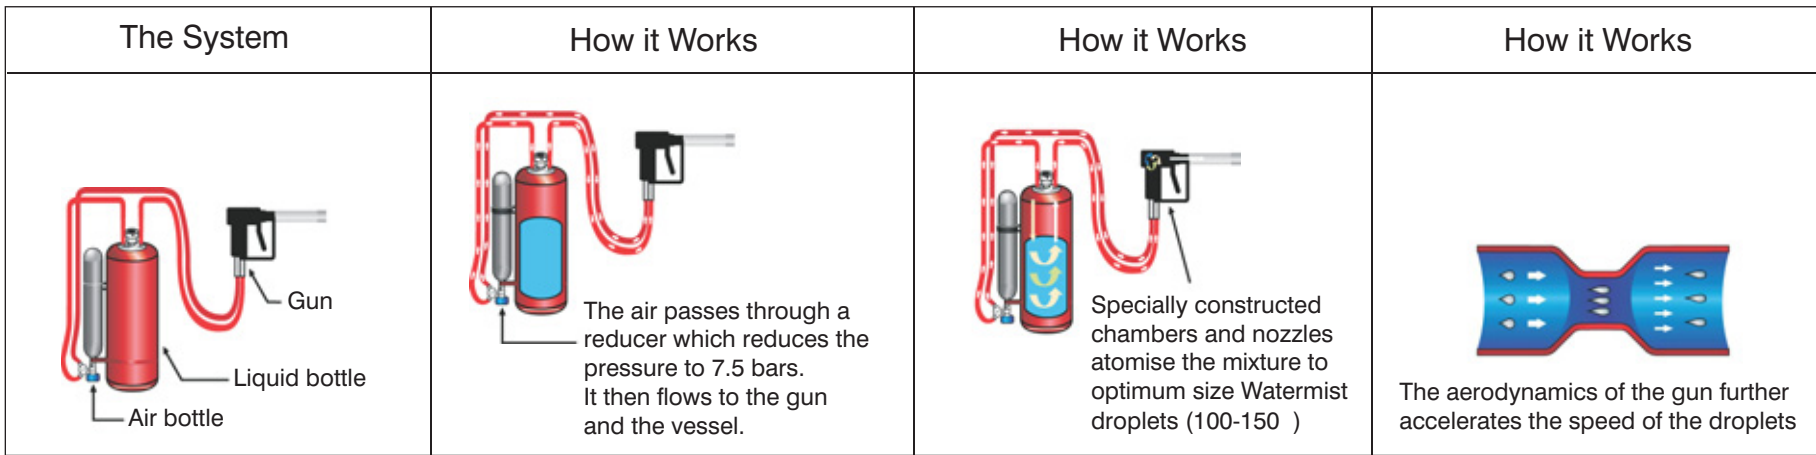

The need of the hour is a fire engine that can manoeuvre any road, zip through traffic and reach the burning premises in minutes.

Ceasefire introduces a state-of-the-art extinguisher on wheels – The Mobile Firefighter. Powered by the world’s most revolutionary firefighting technology: Watermist.

## Watermist Technology and How it Works

Ceasefire’s patented Watermist technology uses the world’s oldest, most effective fire suppressant – water, increasing its power many times over.

Here’s how. Ceasefire extinguishers equipped with Watermist break water down into a fine mist. This mist is then thrown at the fire with a great kinetic force, covering a large surface area. As soon as the mist comes in contact with the fire, it instantly turns into steam. Enveloping the flames, cutting down the oxygen supply and reducing the temperature to below combustion levels. Ensuring that even the largest fire succumbs to Watermist technology. In minutes.

## The Power of the Ceasefire Mobile Firefighter

With Ceasefire’s Mobile Firefighter on your side, you can arrive at the scene of the fire in minutes, and keep even the largest fires under control until the fire engines and more help arrives. These unique 9 litre extinguishers, with an extendable hose, can be mounted onto almost any bike.

To add to its firefighting capabilities, two spare containers are also attached. Increasing the power of this firefighter by four!

## What Makes the Mobile Firefighter Formidable?

### The Ceasefire Mobile Firefighter is Equipped with a Host of Features:

The power to tackle A, B, C and electrically started fires

Extinguishing media of clean water or water with enhancement agent

Special AFFF Foam extinguishing enhancement agent

2 Backpacks - 9 Ltr.

Apart from the benefits of speed and Watermist technology, the Mobile Firefighter also brings with it a First Aid kit - which means that you can save lives even before help appears on the scene

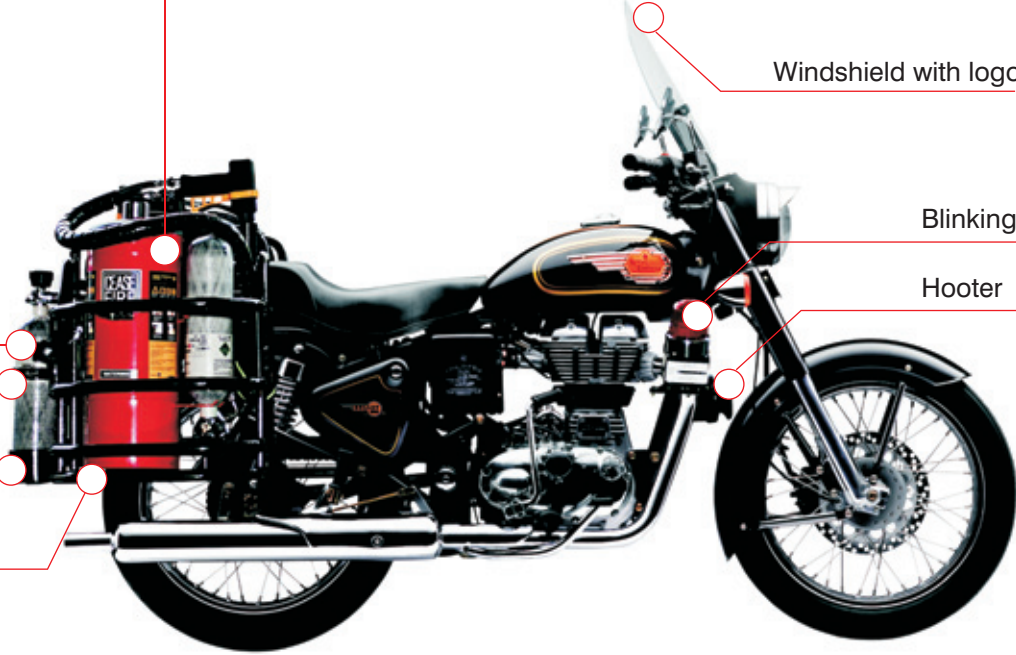

2 Spare Containers

Customised Stand

## Recommended Usage Areas

- Hospital
- Healthcare facilities
- Telecom facilities
- Petrol pumps
- Genset areas
- Paint factories
- Chemical factories
- Cosmetic factories
- Railways
- Aircraft hangers
- Ship building yards
- Factories with high class B risks
- Large workshops and factories
